MBC-AN-LAB

Ditherless Modulator Bias Controller

The Exail MBC-AN-LAB is an automatic bias controller specially designed to lock the operating point of $LiNbO_3$ Mach-Zehnder modulators at the quadrature point and ensure a stable operation over time and environmental conditions.

Unlike classical dither signal based bias controllers, the MBC-AN-LAB does not superimpose any tone signal to the optical modulated signal. It is designed for application where such a tone signal is not desired and typically for analog applications where a high purity carrier is required.

Principle

The Exail MBC-AN-LAB bias controllers is based on the comparison of the optical power before and after the Mach-Zehnder modulator. It uses tap couplers and photodiodes with a proportionnal integrator feed back loop to lock the operating point of the modulator at the Quad+ or Quad- position.

The Exail MBC-AN-LAB is operated from a user supplied PC.

Features

- Designed for Mac-Zehnder modulators
- Quad modes
- High stability and sensitivity

Applications

- RFoF links
- Electronic warfare
- Analog communications

Options

· Internal photodiode and tap coupler

Performance Highlights

Parameter	Min	Тур	Max	Unit
DC bias voltage	-10	-	+10	V
Locking point	QUAD-, QUAD+ -			-
Optical output power stability	-	± 0.1	-	dB
Control	Remote			-

MODULATOR BIAS CONTROLLER | MBC-AN-LAB SERIES | 2/5 MBC-AN-LAB Ditherless Modulator Bias Controller

Bias Control Characteristics

Parameter	Symbol Condition		Min	Тур	Max	Unit	
Timing							
Autotest	Auto	Automatic scan	25	30	40	S	
Initialisation	-	After an autoset	-	10	-	S	
Start up	-	-	10	-	30	S	
QUAD+, QUAD-							
Optical output power stability	-	Over 2h and modulator temperature controlled	-	± 0.1	_	dB	

Electrical Characteristics

Parameter	Symbol	Condition	Min	Тур	Max	Unit
DC Bias Voltage	$V_{\rm bias}$	-	-10	-	+10	V
Automatic locking point	-	Customer choice	QUAD- (-	50%), QUAE)+ (+50%)	-

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Condition	Min	Max	Unit
Operating temperature	-	-	-10	+45	°C
Storage temperature	-	-	-40	+70	°C

About us

Exail Photonics produces specialty optical fibers and Bragg gratings based fiber optics components and provides optical modulation solutions based on the company lithium niobate (LiNbO₃) modulators and RF electronic modules.

Exail Photonics serves a wide range of industries: sensing and instruments, defense, telecommunications, space and fiber lasers as well as research laboratories all over the world.

Exail reserves the right to change, at any time and without notice, the specifications, design, function or form of its products described herein. All statements, specification, technical information related to the products herein are given in good faith and based upon information believed to be reliable and accurate at the moment of printing. However, Exail provides no warranty (whether express or implied or statutory) as to the description, sufficiency, accuracy or completeness, merchantability or fitness for a particular purpose of any information or specification detailed herein. No liability is assumed for any inaccuracies and/or as a result of use of the products. The user must validate all parameters for each application before any use and he shall assume all risks and responsibilities in connection with the use of the products.
