MBC-IQ-LAB

IQ Modulator Bias Controller

iXblue MBC-IQ-LAB is a bias controller designed to stabilize the three operating bias points of a dual parallel modulator. This MBC is fully automated and uses a reduced dither signal to provide a rock stable setpoint of your phase delays over time and environmental conditions. It has been designed for optimal performance in CS-SSB applications to ensure a robust and steady optical carrier extinction.

Finally, a user-friendly Graphical User Interface - GUI - is provided for monitoring and (manual) setpoint adjustments if desired.

FEATURES

- Designed for I&Q modulators
- Automated bias points (MIN, MIN, QUAD)
- High stability
- High sensitivity

APPLICATIONS

- Analog communications CS-SSB

OPTIONS

- Internal photodiode and tap coupler
- Dual drive IQ modulator

Absolute Maximum Ratings

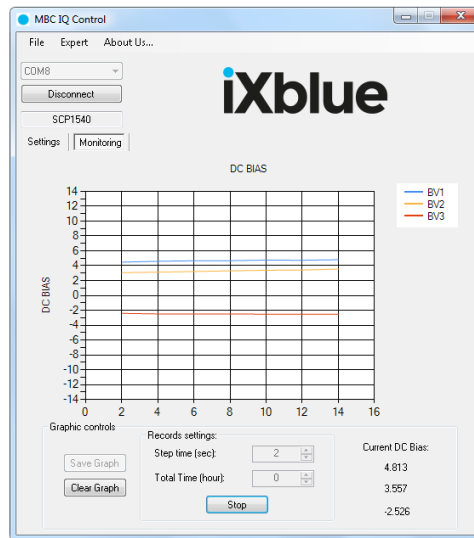

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
