

The ModBox-CBC-1064nm is a proven and robust multi-channels phase modulation solution for multibeam coherent combination.

The ModBox operates at 1064 nm and is composed of 4 or 8 parallel and independent channels for adjusting the phase of each to match the others. Each channel allows an adjustment of the temporal phase for synchronization of all beams. The design integrates ixblue proprietary low frequency phase modulator combined with its matching RF electronic and associated with a selected for high accuracy and for wide delay range tunable optical delay line.

Specific effort is done for ModBox product: the ixblue electro-optical modulators are screened from our regular production to ensure very low insertion loss, high polarization extinction ratio, low Residual Amplitude Modulation, and high phase modulation stability. Additionally, ixblue phase modulator is well known to be the best planar phase modulator in the NIR featuring the highest optical input power handling capability.

The component selection makes the ModBox-CBC-1064nm an accurate, adjustable, and reliable phase-lock modulation solution for Coherent Beam Combining technique.

FEATURES

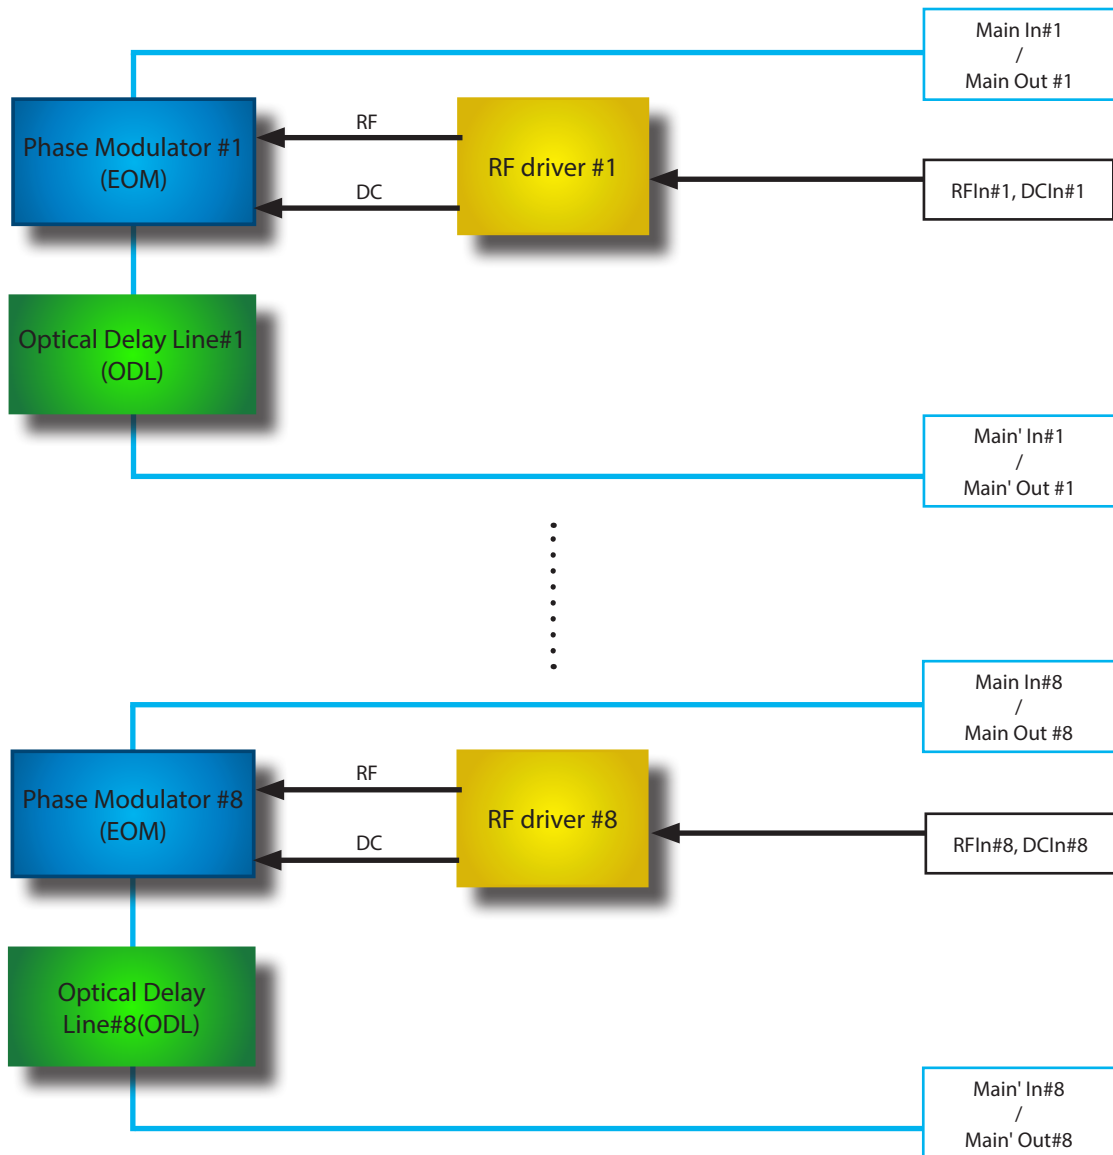

- Proven and reliable solution
- Adjustable delay range and temporal phase modulation per channel
- Scalable number of channels
- Adjustable Residual Amplitude Modulation
- Lower Insertion Loss
- Higher PER

The ModBox-CBC-1064nm can be associated with the Spectral Broadening unit ModBox-SB-1064nm based on high frequency phase modulation in order to counter the SBS effects caused by the amplification of a narrow linewidth laser source.

Performance Highlights

Parameter	Typical
Operating wavelength	1064 nm
Insertion loss	< 5 dB
Polarisation extinction ratio	> 25 dB
Adjustable delay range	600 ps
RAM	Adjustable

Functional Block Diagram

The ModBox-CBC-1064nm-xCH is an independent 4 or 8 channels, each integrates:

- an high speed temporal phase modulator,
- a modulator matching RF amplifier,
- a tunable and remotely controllable optical delay line.

The ModBox is a reciprocal modulation unit: each main input (respectively output) can be seen as an output (respectively input) without any alterations to the specification.

Input Specifications

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Electrical Input Specifications						
Input RF voltage	V_{RF_IN}	50 Ω	-	110	-	mVpp
Input RF frequency	F_{RF_IN}	50 Ω	-	-	200	MHz
Input DC voltage	V_{DC_IN}	50 Ω	-	± 250	-	mV

Output Specifications ⁽¹⁾

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Operating wavelength	λ	-	950	1064	1150	nm
Maximum insertion loss	IL	Including ΔIL_{ODL} / Per channel	-	4	5	dB
Insertion loss uniformity	ΔIL_{ODL}	Loss variation over delay range	-	0.6	-	dB
Insertion loss inter-channels	ΔIL	-	-	0.8	1	dB
Polarisation extinction ratio	PER	Optimized for 1064 nm	25	30	-	dB
Temporal modulation	BW	From EOM	-	-	200	MHz
Adjustable delay range	DR	ODL, remotely controllable	-	600	-	ps
Inter-channel delay range	ΔDR	-	0	-	150	ps
Delay resolution	DRes	-	-	1	-	fs
Optical return loss	ORL	-	-40	-45	-	dB
RF driver gain	G	DC & RF	25 ⁽²⁾	26 ⁽²⁾	-	dB
Modulation rise & fall times	Rt / Ft	20 % - 80 %	8	-	-	ns

(1): The proposed system/components will properly work either with a kHz linewidth laser as well as with a 27 GHz one.

(2): The driver's gain will be not affected by the temperature when it ranges 25 °C \pm 10 °C.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol		Min	Max	Unit
RF input voltage	EV_{in}	-	-	10	Vpp
DC input voltage	DCV_{IN}	-	-	± 1	V
Optical input power	OP_{in}	To the EOM input port (Main In)	-	25	dBm
		To the ODL input port (Main' In)	-	27	dBm
Operating temperature	OT		0	+55	°C

Software interface

The ModBox-CBC is coming with a Graphical User Interface (GUI) allowing the controls of the Optical Delay Lines delays. Each channel can be adjusted individually.

The screenshot displays the '8CH-MP ModBox Control' software interface. It features a grid of 8 channels, each with a 'Find Home' button, 'Time Delay' and 'Motor Speed' sliders, and a 'Status' indicator. All channels are currently set to 599.999 ps and 100.0% respectively, with a status of 'IDLE'. A gear icon for settings is visible in the top right, and the version 'v1.0' and 'ixblue' logo are in the bottom right.

Channel	Find Home	Time Delay	Motor Speed	Status	Actual Delay
ODL1	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL2	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL3	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL4	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL5	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL6	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL7	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps
ODL8	Find Home	599.999 ps	100.0 %	IDLE	599.999 ps

Panels

Parameter	Condition	Min	Typ	Max	Unit
Rear Panel

ModBox-CBC-1064nm-xCH

xCH = Number of parallel channels: 4CH 4 channels or 8CH: 8 channels

About us

ixblue Photonics includes ixblue ixFiber brand that produces specialty optical fibers and Bragg gratings based fiber optics components and ixblue Photline brand that provides optical modulation solutions based on the company lithium niobate (LiNbO₃) modulators and RF electronic modules.

ixblue Photonics serves a wide range of industries: sensing and instruments, defense, telecommunications, space and fiber lasers as well as research laboratories all over the world.
