The ModBox-VNA-CBand is a C-Band and wide bandwidth Optical Transmitter designed to extend Vectorial Network Analyzers applications into the optical domain.

When associated with a Vectorial Network Analyzer, they make up a high performance and easy to use test equipment for the characterization of photoreceivers or any high speed optoelectronic device.

The ModBox-VNA-CBand incorporates a 1550 nm low RIN laser source and a modulation stage based on a wide bandwidth LiNbO\(_3\) modulator with an automatic bias control circuit.

**Performance Highlights**

**FEATURES**

- Analog modulation up to 40GHz, 70GHz
- Dither-free bias controller
- Low RIN
- High harmonics suppression

**APPLICATIONS**

- Transmission system test
- Components characterization
- Receiver frequency test
- R&D laboratories

**OPTIONS**

- 850 nm, 1310 nm & 1550 nm, O-band
- Multi-Channel
ModBox-VNA-CBand series
C-Band, 40 GHz, 70 GHz Modulation Unit

Functional Block Diagram

The ModBox-VNA-CBand features:

- A chirp-free X-cut LiNbO$_3$ (Lithium Niobate) Mach-Zehnder Analog Intensity modulator. It is selected for its high electro-optic bandwidth and flat, low ripple, electrooptic response curve.
- A modulator bias controller. The internal LiNbO$_3$ modulator is a X-cut device with very low drift. However an automatic bias control circuit is provided to lock the operating point of the modulator at the quadrature point whatever the environmental conditions. The bias control circuit is dither free and therefore does not add any spurious content to the small signal modulation generated by the VNA. It is pre-set for operation in quadrature, in the linear portion of the modulator transfer curve.
- An 1550 nm low RIN laser directly spliced to the modulator. Wavelength and power of such embedded laser are tunable through the front panel controls or the ModBox software interface.

The ModBox-VNA-CBand is controlled from the front panel thanks to the Smart interface touch screen. The Smart manual interface allows for bias control circuit and laser current settings. It comes also with a simple GUI solution, Windows based and implemented through the Ethernet interface.
**Input Electrical Specifications**

(1): The ModBox-VNA-CBand does NOT feature an internal RF amplifier. The VNA characterization is usually performed in a “small signal mode”, therefore a RF amplifier is not necessary. Omitting the amplifier allows to obtain a smoother and flatter transfer function.

Ordering information

ModBox-VNA-CBand-XXGHz-YY
VNA = Optical Vectorial Network Analyser extension
CBand = Embeds laser, 1550 nm by default
XX = Analog Modulation bandwidth: 40GHz up to 40 GHz - 70 GHz up to 70 GHz

Opt-CTun
C-Band Tunable Laser option

About us

iXblue Photonics produces specialty optical fibers and Bragg gratings based fiber optics components and provides optical modulation solutions based on the company lithium niobate (LiNbO₃) modulators and RF electronic modules.
iXblue Photonics serves a wide range of industries: sensing and instruments, defense, telecommunications, space and fiber lasers as well as research laboratories all over the world.
