

Rovins 9-DVL

All-in-one combined Inertial Navigation System and Doppler Velocity Log system

The Rovins 9-DVL embeds in a compact design an Inertial Navigation System (INS) from Exail based on the most compact high-performance Inertial Measurement Unit (Exail UmiX IMU) and a DVL from Nortek Group. The tight integration of the IMU and DVL raw sensor data allows for higher levels of accuracy and reliability. With no need for calibration, the Rovins 9-DVL can be integrated into all types of underwater vehicles to a depth of 6,000 m.

FEATURES

- All-in-one high-accuracy 3D positioning with heading, roll, pitch and bottom velocities
- Unique horizontal and compact design
